# Fitting and Operating Instructions

# Rooflight Model 28, 32, 40

### <u>Illustration</u>

We only recommend installation by authorised dealers.

Please read these instructions carefully before fitting and operating the rooflights.

Important: We cannot be held responsible for incorrect fitting, handling or operation.

Any product faults relating to the production and materials used should be notified to us via an authorised dealer immediately.

## Fitting Instructions

Warning!	⚠	Never stand on the dome of the rooflight! (See picture 1)
Fitting position	Δ	Choose a fitting position that will not interfere with other roof mounted components (e.g. roof-racks/antenna's etc.) and avoid internally installed electrical cables and furniture, which could impede the correct operation of the rooflight.
		The rooflight should only be fitted to a flat roof surface, both in- ternally and externally.
Aperture size		Depending on rooflight model (see technical data page 6 - 7).
Roof thickness		Ensure the correct rooflight is selected for the roof thickness (for available size options see page 6).
Fitting direction		Rooflights must only be fitted with the operating handles facing the front and rear of the vehicle, not across the vehicle.
Fitting screws	Δ	The length of the screw should be determined by the roof thick- ness, plus approximately 10 mm tor the screw to enter the upper frame.
		Secure only with pan, or round headed screws (not supplied), 3,5 mm/ head according to DIN ISO 7049 (DIN 7981). Do not use countersunk screws as they will damage the rooflight frame. (See picture 4).
Sealing	⚠	Use only long term flexible sealant, suitable for external use, (not supplied), and also suitable for the material of the upper frame. Consult your sealant supplier.
Fitting		Before fitting the rooflight remove the profiles covering the flynet and blind rollers. These are temporarily/partially fitted into place when new. PLEASE NOTE: When fully fitted these profiles cannot be removed without being damaged. It is therefore important to make sure the rooflight is fitted and operates correctly, before fully installing the profiles.
		Correctly align the upper and lower frames and secure evenly with the screws. Do not over-tighten as this may damage the frame, or affect the correct operation of the rooflight. If the inner frame starts to distort, the correct torque has been reached (See picture 2-3).
		Screws not supplied!

### **Operation Instruction**

Instruction for use The rooflight can be opened fully, or in four different directions, so that the dome can be angled against driving weather conditions. To open squeeze the locks (optional) into the handles and push open.

To open and close pull the flynet slightly into inner direction until it slides beside the flynet click. Do not open more than 90°, to avoid damaging the hinges. Do not over-bend as this may break the flynet frame.

Free-air-flow

When closed there is a free airflow through the rooflight, which must be kept free at all times (see technical data page 6-7). Never close the openings of the free-air-flow.

Before driving

IMPORTANT: All rooflights must be closed and locked down before travelling. (See picture 5-6)

#### **Care Instructions**

Cleaning

The rooflight should only be washed by hand, using a sponge with plenty of clean water to avoid scratching. Caustic detergents and solvents may attack the plastic and make it brittle or disintegrate.

For easier cleaning of the dome it can be removed from the frame by releasing the four screws holding the handle arms. (Models from May 2010, Trox TK10 screws) (See picture 7)

Make sure that only the original screws are used when replacing the dome and that they enter the thread in the plastic correctly. Do not over-tighten

Never remove the screws holding the dome and the handles together (See picture 8). These are secured by a torque screwdriver and should only be handled by an approved dealer.

Remove the flynet. The flynet is hanged in and it is removed by first opening fully and hanging out from the frame. Reverse the process to install.

Attention: To avoid damage, do not bend the flynet frame. Clean the flynet mesh only with clean water too.

### Technical Information

#### Product description

- Opaque rooflight with free airflow

#### - Spring assisted mechanism, flipable into four different directions, with locks

- Concealed fixing screws

- Removable flynet, optional roller blind

- ECE R43 Whole Vehicle Type Approved (Please ask for further details.)

#### Technical Data:

Dome/ outer frame material:

Polypropylene

#### <u>Model 28</u>

Aperture:280 x 280 mmSize dome:330 x 330 mmFree-air-flow:60 cm²Height over roof:78 mm

#### <u>Model 32</u>

Aperture:320 x 360 mmSize dome:380 x 420 mmFree-air-flow:120 cm²Height over roof:83 mm

#### <u>Model 40</u>

Aperture:	400 x 400 mm
Size dome:	480 x 480 mm
Free-air-flow:	30 cm² / 150 cm²
Height over roof:	91 mm

## Technical Information

#### Model Options:

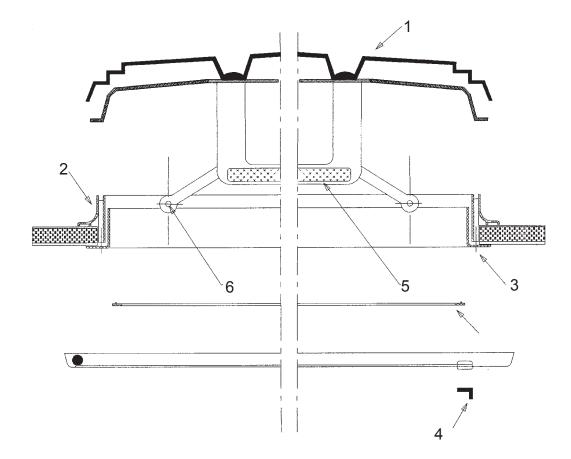

#### Model 28

Not available anymore, has been replaced by rooflight model 29.

#### Model 32
